Courts*

Jacobs is a major international design, technical and management consultancy with over 4000 staff operating from offices throughout the United Kingdom.

These resources are located across our office network in response to clients' individual needs. The majority of our offices are currently able to offer a full multi-disciplinary building consultancy service from their own office location. Other offices either provide a range of construction-related services or, on some occasions, a single professional service. The offices are therefore regularly involved in working together to offer clients the specific professional service, which they require.

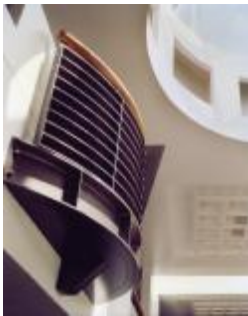

Our considerable current experience provides us with an in-depth understanding of authorities' needs and processes, including the particularly wide range of stakeholders involved in any public building project or consultancy service. We are conversant with national guidelines, policies and initiatives and enjoy an excellent relationship with the DFEE and CABE.

Our Team

Jacobs have over 500 staff who are involved in providing building consultancy to our clients, working either in in-house multi-disciplinary teams or as part of wider teams of specialists shared with other consultants or local authority offices. The majority of our team's workload is with public sector clients and this allows a two-way exchange of knowledge and the continuing development of our understanding of public sector clients' needs, priorities and the political environment.

Our multi-disciplinary capability provides clients with access to a wide range of skills:

- **Project Management, Master Planning, Architecture**
- **Building Engineering, Quantity Surveying, Civil / Structural Engineering**
- **Planning Supervisor, Building Surveying, Landscape Architecture**
- **Site Supervision, Environmental Modelling, Environmental Consultancy**
- **Fire Engineering, Procurement Consultancy**

Depending on the requirements of the project Jacobs are able to offer a comprehensive multi-disciplinary service or provide specific services as part of a larger team.

- **Feasibility**
- **Concept Design**
- **Production information**
- **Procurement Advice**
- **Tender Action**
- **Contract Management**
- **Technical Consultancy**
- **Education Consultancy**
- **BREEAM Assessment**
- **Environmental Modelling**
- **Masterplanning**
- **DDA**

Our Service

Our multi-disciplinary approach to problem-solving ensures that solutions are integrated and address the full range of issues and concerns which affect complex building projects.

We work closely with our clients from inception to completion of their project, checking step by step that we are responding to their needs and investing their funds in a way which responds to their priorities. A successful project for us is one which assists our client in the improved delivery of their service and we highly value feedback from the whole range of project stakeholders.

This same approach applies to our whole range of services whether we are providing design expertise or consultancy advice on a multi-disciplinary or single profession basis. Our teams also increasingly include additional specialists, whether acoustic engineers or environmental consultants and they are supported by appropriate CAD and other specialist software packages.

Our Experience

Our experience of working with Local Authorities is based on a wide range of relationships each of which has been developed to support the individual needs of each client.

We aim to develop a partnership approach which develops over a number of projects as we further understand both what is required of us, and what more we can offer.

These relationships include a number of formal partnerships, based on long term contractual relationships which span over many years. Under such arrangements we can provide project or programme management either working with in-house teams or working in-house with our client's staff.

Shenley Brook End School ~ Milton Keynes

We also enjoy many individual commissions either for consultancy or design and can bring our considerable experience across all professions of the demands of creating and renewing public buildings. These commissions are becoming increasingly specialist and our early involvement in PFI, DDA assessment, Asset Management, contractor partnering and M4I projects places us in a strong position to support clients in their new initiatives.

Jacobs has been involved in the widest possible range of public building projects from modest extensions and refurbishments to major new civic projects, including

- **Nursery Schools, Primary Schools, Secondary Schools, FE Colleges, Universities**
- **Council Offices, Day Centres, Residential Homes, Libraries, Museums, Sports Halls, Leisure Centres**
- **Theatres, Magistrates and Crown Courts, Police Stations, Fire Stations**
